PROFESSIONAL SUMMARY

Motivated Full Stack Developer with 8+ months of internship experience building scalable, enterprise-grade applications using Java, Spring Boot, Microservices, and React.js. Experienced in designing secure RESTful APIs, implementing JWT-based authentication with OAuth2 principles, and delivering high-performance frontend experiences. Eager to contribute to Barclays' engineering excellence by applying strong CS fundamentals, clean architecture practices, and a collaborative mindset to drive robust, fault-tolerant enterprise solutions.

TECHNICAL SKILLS

Languages	Java 11+/17, Python ,JavaScript (ES6+), HTML5, CSS3, SQL
Frameworks	Spring Boot, Spring Cloud, Spring MVC, RESTful APIs, Microservices, React.js, React Native (familiar)
Architecture	Microservices, Event-Driven Systems, MVC, Layered Architecture, Serverless (concepts), API Gateway
Security	JWT, OAuth2, Role-Based Access Control (RBAC), Secure CRUD, Web Vulnerability Prevention
Databases	MySQL, MongoDB, Schema Design, Query Optimisation, Index Tuning
DevOps & Cloud	Docker (familiar), Kubernetes (familiar), CI/CD (GitHub Actions, Jenkins concepts), AWS Lambda (familiar)
Testing	JUnit, Mockito, Jest, Postman (API contract testing)
Tools	Git, GitHub, IntelliJ IDEA, VS Code, Postman
CS Fundamentals	Data Structures & Algorithms, OOP, System Design, High Availability & Fault Tolerance concepts

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern | Zoomcode Technology LLP

Jan 2026 – Apr 2026

- Architected RESTful microservices using Spring Boot with layered controller → service → repository design, clean exception handling, input validation, and structured API contracts aligned with enterprise standards.
- Delivered end-to-end full-stack features independently — from React.js component design to backend API implementation — within tight sprint timelines, demonstrating ownership and agile delivery capability.
- Implemented secure API communication patterns including JWT-based token validation and RBAC, following OAuth2 security principles to protect endpoints against unauthorised access.
- Diagnosed and resolved MySQL performance bottlenecks through schema refactoring, index optimisation, and query tuning, reducing slow query counts on critical endpoints and improving system throughput.
- Wrote unit tests using JUnit and Mockito for service-layer components; validated API contracts with Postman to ensure correctness before integration.
- Collaborated cross-functionally with design and product teams to define API contracts and translate business requirements into maintainable technical solutions.

Frontend Developer Intern | 51 Digital Media

Aug 2025 – Dec 2025

- Engineered modular React.js component libraries for SaaS dashboards applying separation-of-concerns principles, reducing UI build time across feature sprints and improving code reusability.

- ▶ Implemented Progressive Web App capabilities — service workers, offline caching, push notifications — extending product reach to low-connectivity environments, demonstrating knowledge of event-driven browser architectures.
- ▶ Designed and consumed 10+ RESTful APIs with robust error handling, optimistic UI updates, and structured loading state management, improving perceived application performance.
- ▶ Built Hello NFC Platform frontend integrated with hardware NFC/DVC APIs, demonstrating ability to work across software-hardware boundaries in production systems.
- ▶ Applied Core Web Vitals optimisations (lazy loading, tree-shaking, asset compression) achieving a 95+ Lighthouse performance score on a live product, reflecting commitment to performance budgeting and code quality.
- ▶ Collaborated with backend engineers on API contract definition, ensuring seamless integration between frontend and microservices layers.

PROJECTS

ThinkerTheorist Blog Platform · Java · Spring Boot · MySQL · React.js · JWT · REST

- ▶ Architected a full-stack content management system from scratch — designed relational DB schema, defined REST API contracts, built layered Spring Boot backend, and developed a secure React.js frontend.
- ▶ Implemented JWT-based authentication with OAuth2-style role-based access control (Admin / Author / Reader) and secure CRUD operations; followed OWASP best practices to prevent SQL injection, XSS, and CSRF.
- ▶ Structured application with clean microservice-aligned separation of concerns, modular controllers, service interfaces, and repository layers ensuring maintainability and testability.

Portfolio Website · HTML5 · CSS3 · JavaScript · PWA

- ▶ Built a production-deployed portfolio achieving a 95+ Lighthouse performance score through performance budgeting, semantic HTML5, WCAG accessibility compliance, and optimised asset delivery.

EDUCATION

Master of Computer Applications (MCA)

Medi-Caps University, Indore
Aug 2023 -July 2025

CGPA: 8.4 / 10

Bachelor of Computer Applications (BCA)

Govt. Holkar Science College, Indore
Aug 2020 -May 2023

CGPA: 7.0 / 10

CERTIFICATIONS & ACHIEVEMENTS

- ▶ Spring Boot — Scaler Academy (comprehensive backend development curriculum)
- ▶ Java & DSA — Infosys Springboard (strong algorithmic and data structures foundations)
- ▶ Code Master Certification — First Round Cleared (competitive programming & analytical thinking assessment)

KEY STRENGTHS FOR THIS ROLE

✓ Scalable Microservices Design

Spring Boot layered architecture with clean separation of concerns

✓ Security Best Practices

JWT, OAuth2, RBAC, OWASP-aware secure API design

✓ Full-Stack Ownership

End-to-end feature delivery from React UI to Spring Boot API

✓ Performance Optimisation

DB indexing, query tuning, 95+ Lighthouse scores on live products
